From: Alexander Holtzman

Subject: Tobacco Additives

As the new administration takes shape, we have been trying to discern where any follow-up activity on tobacco additives might take place.

We now have information that the Advisory Council to the Division of Cancer Cause and Prevention of the National Cancer Institute is in the process of organizing a smoking health advisory committee. This committee will be asked to take the recommendations set forth under the cancer and pharmacology sections of the Surgeon General's Report and to recommend a program. It is quite possible that this group will discuss policy and program with respect to tobacco additives.

The following individuals have been invited to serve on the committee: Dr. Fred Bock of Roswell Park, Dr. Michael Guerin of Oak Ridge National Laboratories, and Dr. T. C. Tso of the USDA. No one from the tobacco industry will be invited to serve on this committee.

Alexander Holtzman
